Tools

Get started with Web App Monitoring

1

Choose your language

NODE.JS

2

Get your license key

Reveal your license key

(This customizes your configuration, below.)

3

Install the New Relic Node.js agent

npm install newrelic

4

Configure the newrelic.js file

a. Copy newrelic.js from node_modules/newrelic into the root directory of your application

b. Set a value for app_name

c. Replace the license_key value with your New Relic license key from Step 2

5

Require New Relic

Make this the first line of your app's startup script:

require('newrelic');

6

Deploy your application

7

See data in 5 minutes

Watch a video on installing the Node.js agent

PRO Trial Included

Your account comes with a 14 day free trial of New Relic Pro. The trial begins once your application starts sending us data, after you've followed your language specific installation instructions (located to the left).

FREE Server Monitoring

Any New Relic account comes with Server Monitoring, free of charge.

[Server Monitoring instructions](#)

Downsides 👎

- No RUM-Testing for node.js yet
- Only gives you basic metrics
- Free account only gives you 24h data retention
- Data is somewhere in the US

Upsides 👍

- It's free
- It's better than nothing to see what's happening
- Send email if app is unreachable
- Plugins for different applications (databases, proxies, etc.)

Detailed Way

using graphite/statsd

Graphite?

What?

Store numeric time-series data

Render graphs of this data

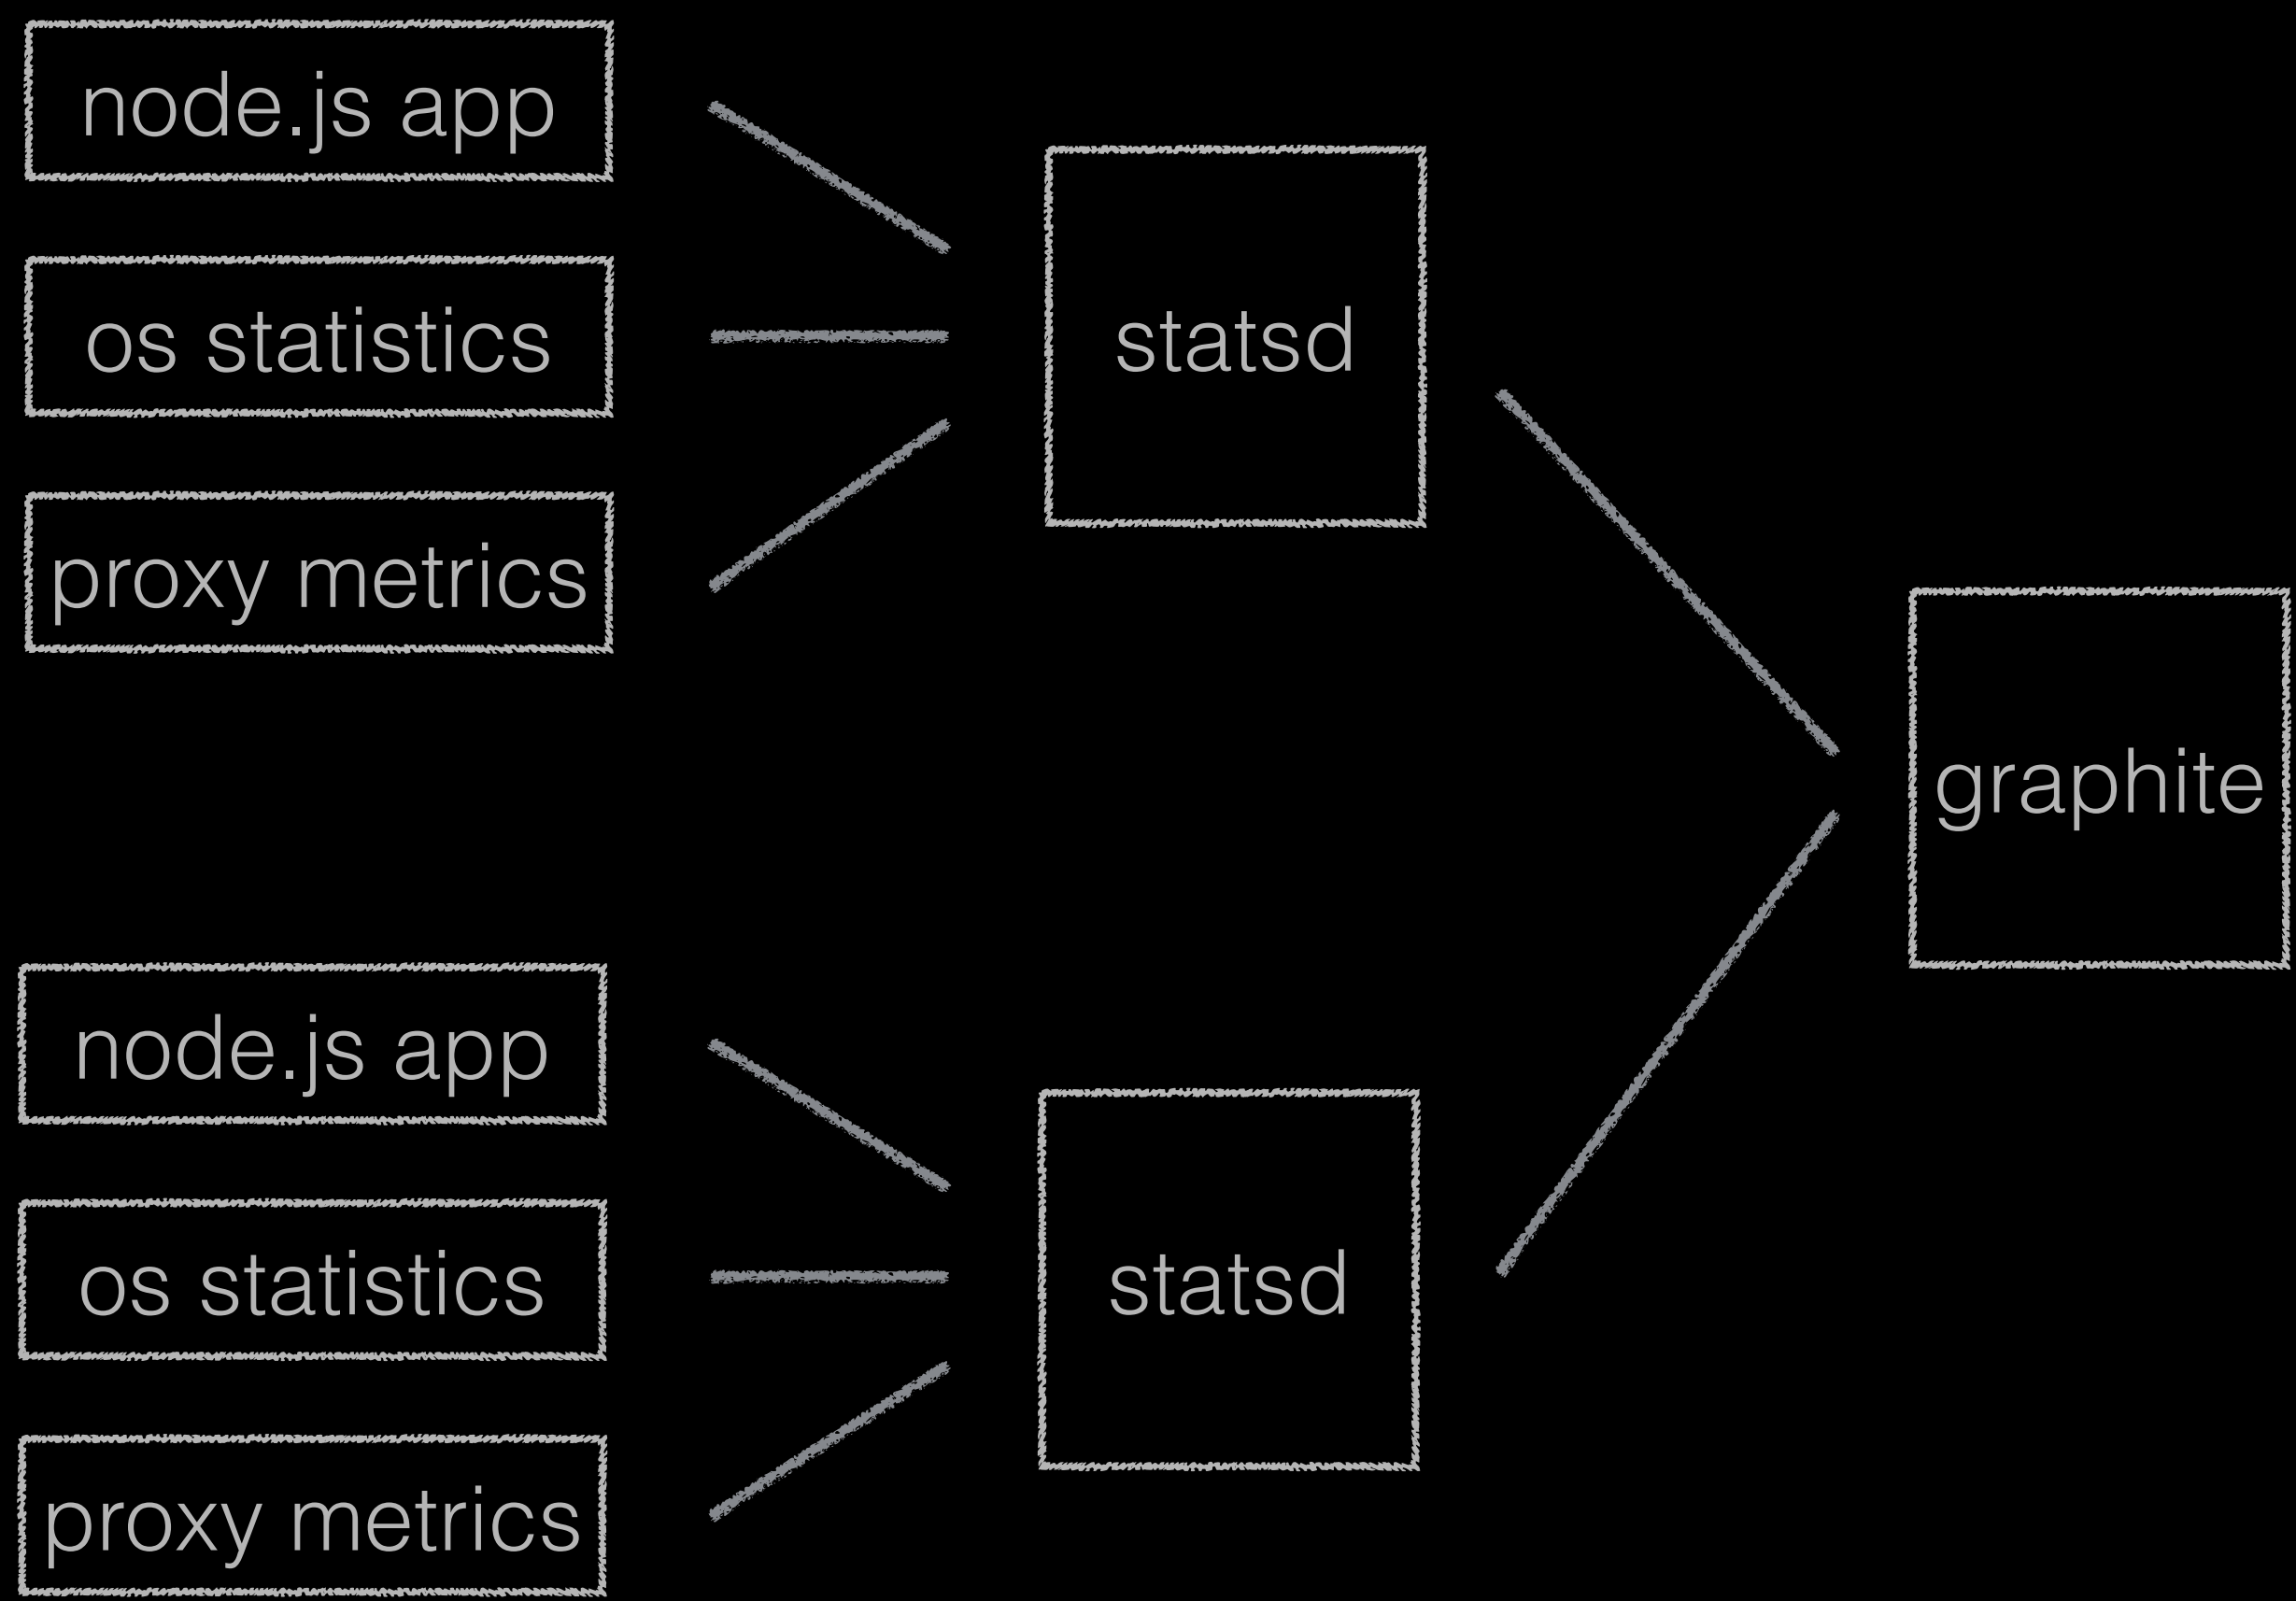

Statsd?

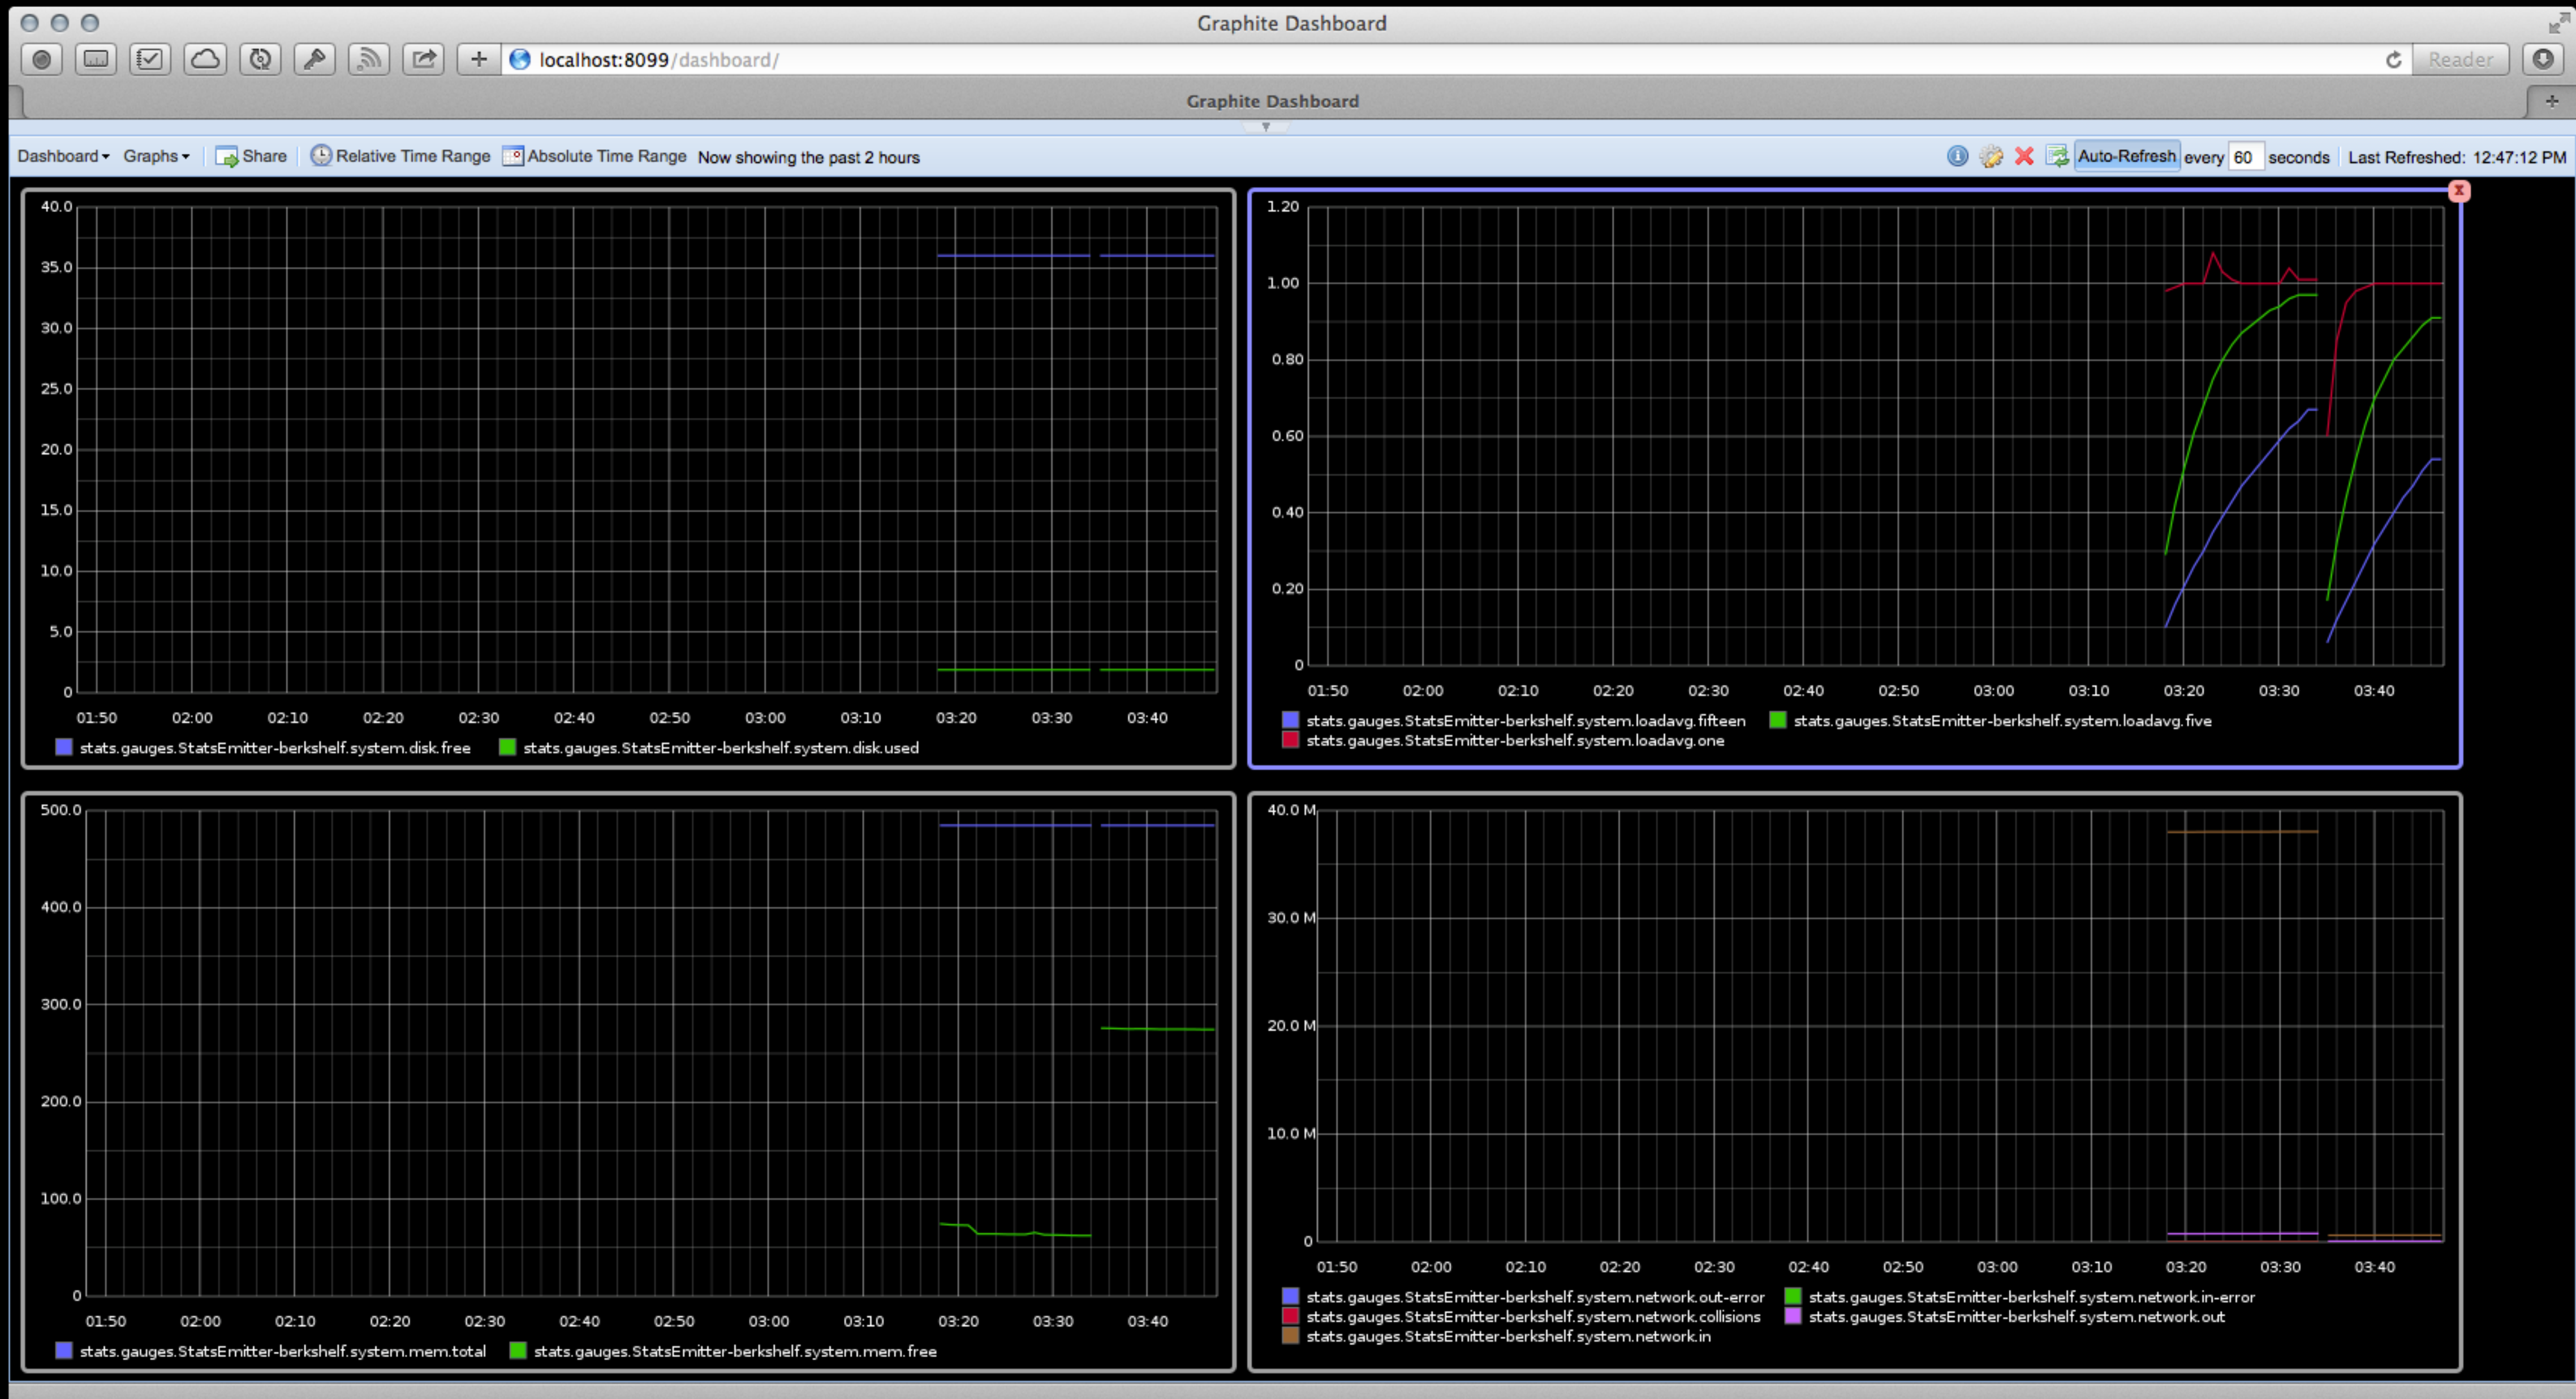

What? More?

Aggregate time-series data...

...and send it to graphite in intervals

Example Architecture

Demo

Downsides 👎

- You have to do it...

Upsides 👍

- You can graph the world... and more!
